Saint Vincent Theme

A clean Beamer theme for economics

Gianluca Tisci

Alma Mater Studiorum — University of Bologna
Bachelor in Economics and Finance

August 7, 2026

Overview

1. Theme basics

2. Shared features

Theme basics

Bullet points

With a subtitle

- First point
- Second point
  - A nested point
- Third point

Blocks

Some text will be highlighted because it matters. Do not overdo it.

Block

Carries the theme accent.

Alert block

The one place a second colour is warranted — an alert that looks like everything else is not an alert.

Examples

Neutral, rather than introducing a third hue.

Two columns

Heading

1. Statement
2. Explanation
3. Example

The theme loads no font package, so slides use Beamer's own default family. Everything is styled by size, weight and colour only.

Shared features

Pencil marks and results

These come from `almacore`, so they behave identically here, in the lecture-notes class and in the problem-set template.

Underline a key phrase, or box a definition.

Handwritten notes: a comment from the north, and inline arrows — growth accelerated.

$$\max_{x} \; u(x) \quad \text{s.t.} \quad p \cdot x \le w$$

$$x^{*} = w/2p$$

Call-outs, code and annotations

Box 1 — Why one core

The colours, pencil marks and call-outs live in a single class-agnostic package, so the slide theme and the notes class cannot drift apart.

```
regress price mpg weight, robust
```

A draft note: **Gianluca:** *tighten this slide* and **[NB: add citation]**.

Table

Treatment	Response 1	Response 2
Treatment 1	0.0003262	0.562
Treatment 2	0.0015681	0.910
Treatment 3	0.0009271	0.296

Table 1: Table caption

Figure

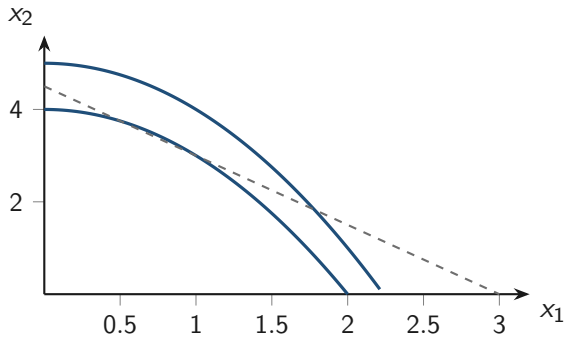

Figure 1: Indifference curves and a budget line.

Pointing at things

a comment from the north

The coefficient 21.15 is significant at 1%.

In an equation: $y_t = \alpha + \beta x_t + u_t$

a comment from the south

Theorem

Theorem (Mass–energy equivalence)

$E = mc^2$

Citation

An example of the `\cite` command:

This statement requires a citation [Smith, 2012].
